

Job Title: Cyber Security Specialist

KMS Solutions is seeking motivated individuals to join our Integrated Cyber Security team at the Naval Undersea Warfare Center, Newport RI. Candidates with an appropriate mix of education and experience are invited to apply.

Job Overview & Responsibilities

The qualified candidate will oversee, evaluate, and support the documentation, validation, and accreditation processes necessary to ensure new and existing information technology (IT) systems meet information assurance (IA) and security requirements at Naval Undersea Warfare Center, Newport RI (NUWC). He/She will ensure appropriate treatment of risk, compliance, and monitoring assurance in support of the development and acquisition of undersea warfare systems. The candidate will use Risk Management Framework (RMF) A&A processes, generate new and maintain existing RMF packages as well as transition current DoD Information Assurance Certification and Accreditation Process (DIACAP) packages to RMF.

The successful candidate will join a select team providing systems engineering and cyber security services to NUWC. Our multi-disciplinary team is heavily involved assisting the U.S. Navy in development of new undersea weapons systems.

Location: Newport RI (Naval Undersea Warfare Center)

Required Education and Experience

At least two of the following criteria must be satisfied for an applicant to be considered for the position:

- 3-5 years validated experience in cyber security and/or IT systems
- Degree in an engineering discipline, mathematics, science, or related technical area or any of CNSSI 4012, 4013, 4014, 4016 or Certificate or equivalent military training
- DoD 8570.01M IAT/IAM Level II Certification (such as Security +)
- Operating Systems Certification (Windows or Linux)
- A SECRET clearance is required for this position; candidates must be eligible to obtain a SECRET clearance.

Preferred Education and Experience

- Current secret clearance, with eligibility to obtain a Top-Secret Clearance
- Advanced degree in information technology or cybersecurity
- Familiarity with US Naval systems (submarine systems preferred)
- 10 or more years' experience in Cybersecurity or IT Systems
- Experience using the NIST Risk Management Framework
- Navy Qualified Validator Level II
- Systems Engineering experience
